

Yudi Maryadi

Full Stack Developer • yudimaryadi039@gmail.com • 082247044713

Full Stack Developer with 2.5 years of experience building scalable systems using Python (Fast API, Flask) in both monolithic and microservice architectures. Skilled in designing RESTful and asynchronous APIs, integrating third-party services, and working with relational (PostgreSQL, MySQL) and NoSQL (MongoDB, Redis) databases. Familiar with Docker, CI/CD pipelines, Celery, and authentication protocols like OAuth2 and JWT. Led backend development for logistics and HRMS platforms serving enterprise clients. Thrive in Agile teams, with strong focus on performance, security, and maintainable code.

Work Experience

Jobseeker – Bali

May 2024 – Present

Sr. Fullstack Engineer

- Managed a team to handle maintenance, migrations, and onboarding of new clients.
- Built and maintained HRMS for 12 clients, including Super Indo, Alfamart, RS Mitra Keluarga, DECA Group, FitHub, and others.
- Collaborated with the Project Manager to provide effort estimations (man-days) for new features.
- Distributed tasks to team members and ensured timelines were met.
- Provided weekly updates to the Project Manager and clients about the development team's progress

Jobseeker – Bali

July 2023 – July 2024

Fullstack Engineer

- Managed B2B production to deliver customized recruitment features for clients, ensuring alignment with their specific business processes.
- Developed an integrated Applicant Tracking System (ATS) platform to centralize candidate management.
- Implemented and optimized scalable web solutions, handling both frontend and backend development.
- Collaborated with cross-functional teams to ensure smooth deployment and maintenance of applications.
- Built and managed a bridge system for sellers to easily track AWB across various expedition services by integrating internal systems with APIs from J&T, JNE, Ninja, and others.
- Enabled automated candidate data collection and CV access within a single dashboard.
- Developed a screening system that calculates compatibility scores between candidate profiles and job requirements, allowing for efficient sorting and prioritization.

Work Experience

Unsircle – Jakarta

May 2022 – July 2023

Product Engineer

- Collaborated with the sales team and contributed to the product team to gather user data for future sprints.
- Managed frontend, backend, database, and DevOps tasks in web company profile development using the Sprint methodology.
- Managed B2B production, tailoring client-specific features according to their recruitment processes.
- Built a monthly sales summary system based on shipment tracking numbers (AWB), allowing businesses to analyze top-performing cities and highest-grossing sellers.
- Delivered valuable insights for business decisions and logistics planning.
- Educated KOLs on the importance of digital marketing in promoting their products.

LIPI Kawasan Cibining (BRIN) – Bogor

February – April 2021

Product Engineer

- Centralized server infrastructure from multiple branch-specific servers to a single data center server.
- Streamlined access across branches and reduced operational complexity.
- Migration server from branch to data center LIPI
- Maintained and troubleshot corporate networks.

Education

Hacktiv8 x AMMAN Scholarship

August 2021 – April 2022

Fullstack Javacript : 84.4 (Graduates)

- Developed strong logical thinking and problem-solving skills through building web applications.
- Gained solid understanding of full-stack development fundamentals.
- Learned and applied modern technologies such as React, Node.js, microservices architecture, Docker, and more.

IPB University

August 2018 – April 2021

Diploma Degree. Computer Engineering. GPA: 3.40

- Studied computer engineering with a focus on hardware, networking, software development, IoT, and big data services.
- Completed a thesis project titled "Development of a Road Detection System Prototype Using a LiDAR Sensor at LIPI."

Skills

Programming Languages

- Python, JavaScript, TypeScript, PHP, HTML/CSS.

Library

- FastAPI, Flask, Node.js, Express.js, Laravel, Sequelize, Redis.io, GraphQLReact.js, Vue.js, jQuery.

Databases

- MySQL, PostgreSQL, MongoDB, Redis.

Tools and Technologies

- Docker, RabbitMQ, Google Kubernetes Engine (GKE), AWS (Lambda, EC2, Lightsail)
